- Point of Care: Electronic Medical Record, Clinical Notes, Bereavement Planning, Clergy and Social Worker Notes, Plan of Treatment, IDT Meeting Planning, Schedules and Time Sheets
- Clinical Review and Quality Improvement
- Interdisciplinary documentation and Team Meetings
- Billing, Collections, Authorizations and Remittance
- Bereavement Support
- Donations Tracking
- Volunteer Hours Tracking and Reporting
- Hospice Management Reporting and Analysis
- Enterprise Capabilities
 - Secure Messaging between Office and Field staff
 - Organizational Structure
 - Automated Routing of Warnings and Alerts
 - Roles based Security
 - Employee Compliance Tracking
 - Time and Labor Management
 - Referral tracking and Marketing Analysis
 - Workflow Management by Exception
 - Data Export
 - Hosted Data Center

Supplement your agency's core application needs with optional advanced capabilities for a highly configurable solution.

Business Benefits

Extensive management reporting and analysis tools allow you to evaluate trends and performance, and to prepare for changes in hospice and reimbursement regulations.

Applications are designed to maintain regulatory compliance with Conditions of Participation and related documentation.

Intuitive software interface eases the transition of your clinical staff into the adoption of technology solution.

Enhanced communication through secure messaging and IDT planning results in higher care team productivity and improved patient care.

Streamlining and elimination of paper based business processes results in enhanced agency efficiency and performance. Supports agency growth while maintaining your current staff levels

Integrated clinical and financial applications improve cash flow and increase the timeliness of the billing department.

Patient-centric "extended family" design addresses bereavement, fundraising and ancillary program requirements.

Context sensitive Point of Care allows access to the complete patient electronic medical record and more.

The widest choice of Point of Care input devices allows your agency to match device preferences and costs to the individual Clinician's requirements.

Unique "Survivability Architecture" ensures that your agency is protected against IT challenges including disasters and emergencies, technology obsolescence, and system capacity planning due to agency growth.

Hosted Data Center managed services minimize the agency's need for local onsite IT support, allowing your agency to invest capital resources in patient services.
